

Flow chart

1) write equation down
and find what Boolean Algebra
might work

Draw out
Diagram

create K-map

Use Boolean
algebra operations
to simplify until
no longer can

Derive
Equation from
K-map

write final expression equal to F

2) Write down variables

write down conditions of inputs to correlating outputs

create expression
where each scenario
is given an And
operator and then
all Ands combined
with ORs

simplify using Boolean algebra,
only used absorption law here

Set expression = i
