

CISC 211 HW 5-1/2 Flowchart

Condition Instructions

Create File:
condInst.asm

Figure out
how conditional
looping works (cmp)

Create the sequence

↳ Start at 2

↳ assign current value for loop

↳ iterate

↳ check & repeat

↳ or exit

Create 5 num variables

Apply a series of checks to
evaluate each and have largest num
in the largest variable

↓ run.sh &
Test gtb

Watch exp → Works!

add the nums
section data
as dd & num1-5
